SUNVARUN TECHNOLOGIES

Sunvarun Technologies is a deep-tech company focused on Industrial IoT, AI, embedded systems and real-time asset intelligence. The company develops technology solutions that help organizations track, monitor, analyze and optimize physical assets through connected hardware, cloud platforms, and AI-powered analytics. Its Smart Tracker deployment at Kuala Lumpur International Airport (KLIA) Terminal 1, Malaysia, demonstrates its capabilities in real-time trolley tracking and management.

Sunvarun's solutions serve multiple industries, including airports, logistics and warehousing, construction equipment and manufacturing. The company focuses on improving asset visibility, utilization, operational efficiency and maintenance planning.

Sunvarun is also developing AI capabilities for predictive maintenance, real-time operational insights, demand forecasting, geozone analysis and automated KPI monitoring, enabling organizations to transition from manual, reactive asset management to data-driven, connected and intelligent operations.
