Principal

# Snapshot of ongoing webinar

The screenshot shows a Zoom webinar interface. The main content area displays a slide titled "Introduction to PHP" with the following text:

**Control structures**

**Conditional Statements**  
Conditional Statements allow you to branch the path of execution in a script based on whether a single, or multiple conditions, evaluate to true or false. Put simply, they let you test things and perform various actions based on the results.

**if statements**

```
<?php
$x=1;

if ($x == 2) {
    print '$x is equal to 2';
} else if ($x == 1) {
    print '$x is equal to 1';
} else {
    print '$x does not equal 2 or 1';
}
?>
```

On the right side, the Zoom control panel is visible, showing audio settings (Muted), a list of participants (including "PHASIBUL HASAN MANSUDORI", "Srinivas Mulakapalli", "Veerabharani A. Kumar", "MD Saaduddin Akbar", and "Sri Gangadhar"), and a list of topics (including "Introduction to Web Application Developm...").
