

**ACS** College of Engineering

Approved by AICTE New Delhi, Affiliated to VTU, Belagavi  
(A Unit of RajaRajeswari Group of Institutions)

CET Code : E186 COMED-K : E003 PGGET : T918

**Department of Biomedical Engineering**

**In collaboration with FICE**

**Intel Intelligent Systems Labs**

**Webinar on “Building New Era AI Applications with Intel  
oneAPI Toolkit”**

**Open for students of ACS COLLEGE OF  
ENGINEERING**

**Date:** Tuesday, 27 July 2021

**Time:** 11 am to 01:00 pm

**Resources Person:** MOHAMMED AMEER, SME, FICE

#### About FICE:

FICE promotes market-relevant education and strives to create a coherent innovation and entrepreneurship oriented ecosystem for all.

#### About Resource Person:

A highly skilled experienced tech professional in the field of Internet of Things and Artificial Intelligence. Ameer is an innovative professional with years of experience in tech solution development, content curation and content delivery around IoT and AI. He has delivered enormous number of tech sessions, webinars and workshops to varied set of audience. Over the years he has conducted more than 200 workshops covering pan India catered to more than 8000 participants on various technologies. He has mentored various projects around IoT, computer vision, automation and AI. Ameer Lives in Bangalore.

#### ABOUT EVENT:

Intel's oneAPI is an open, accessible and standards-based programming system that enables developer engagement and innovation across multiple hardware architectures, including CPUs, GPUs, FPGAs, AI accelerators, and more. These tools all have very different properties and are thus used for various operations—which oneAPI attempts to simplify by unifying them under one model.

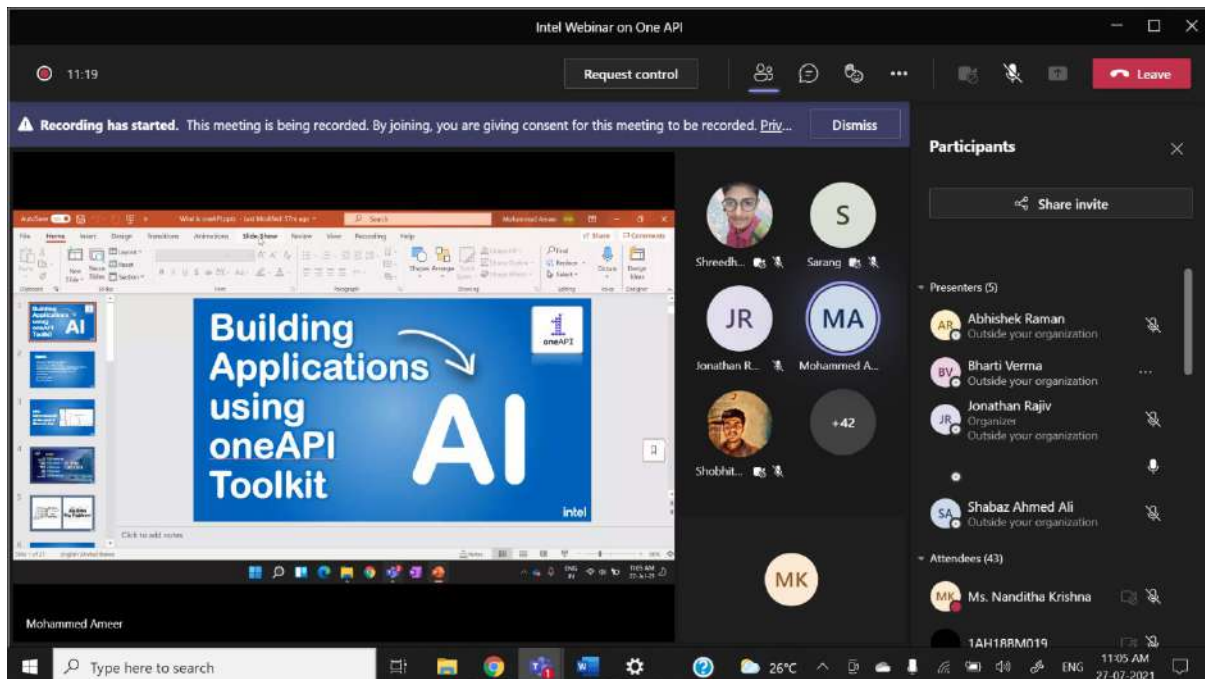

A persisting problem faced by developers even today is the volume of programming environments our increasingly digital world offers. Disparate programming environments disable time-saving strategies such as code reusing and turn into real hurdles for software developers. Intel unveiled oneAPI at its Supercomputing event in 2019 as a part of its software-first strategy. The model signalled Intel's ambitions to have a unified programming framework as a solution to limiting proprietary programming platforms.

oneAPI enables developers to work without the exhaustion of juggling with different languages, tools, libraries and different hardware. Here are a few top features of oneAPI:

### **Data Parallel C++**

To make oneAPI possible, Intel developed the data-parallel language DPC++ (or Data Parallel C++). This language, which is open-sourced, incorporates C++ and the Khronos Group's SYCL to support data parallelism and heterogeneous programming. The language is reportedly

similar to how standard C++ works, with added extensions to it, making it easy for developers to transition to DPC++.

Intel Webinar on One API

## Agenda

- What is HPC and why we need it?
- Introduction to oneAPI Toolkit
- Components of oneAPI Tool Kit : Intel Distro for Python, Sklearn, Modin, Tensorflow, OpenVino Toolkit
- Installation using Conda (new environment)
- Modin Demo
- Scikit Learn Demo
- Tensorflow Demo

Download the one-page summary

The rapid spread of 2019-nCoV acute respiratory disease (hereafter "COVID-19") represented a sudden and very demanding challenge to the rapid diagnostic capabilities of medical institutions. The development of smart analysis and computer-aided diagnosis of medical images with artificial intelligence (AI) techniques offered an effective solution to these new challenges. Huiyi Huiyong Medical Technology Co., Ltd. (HYHY) specializes in the application and development of computer vision and deep learning technologies.
